

Urban Ecosystems

- An urban ecosystem includes
 - people among the living things, and the structures they build among the nonliving things.

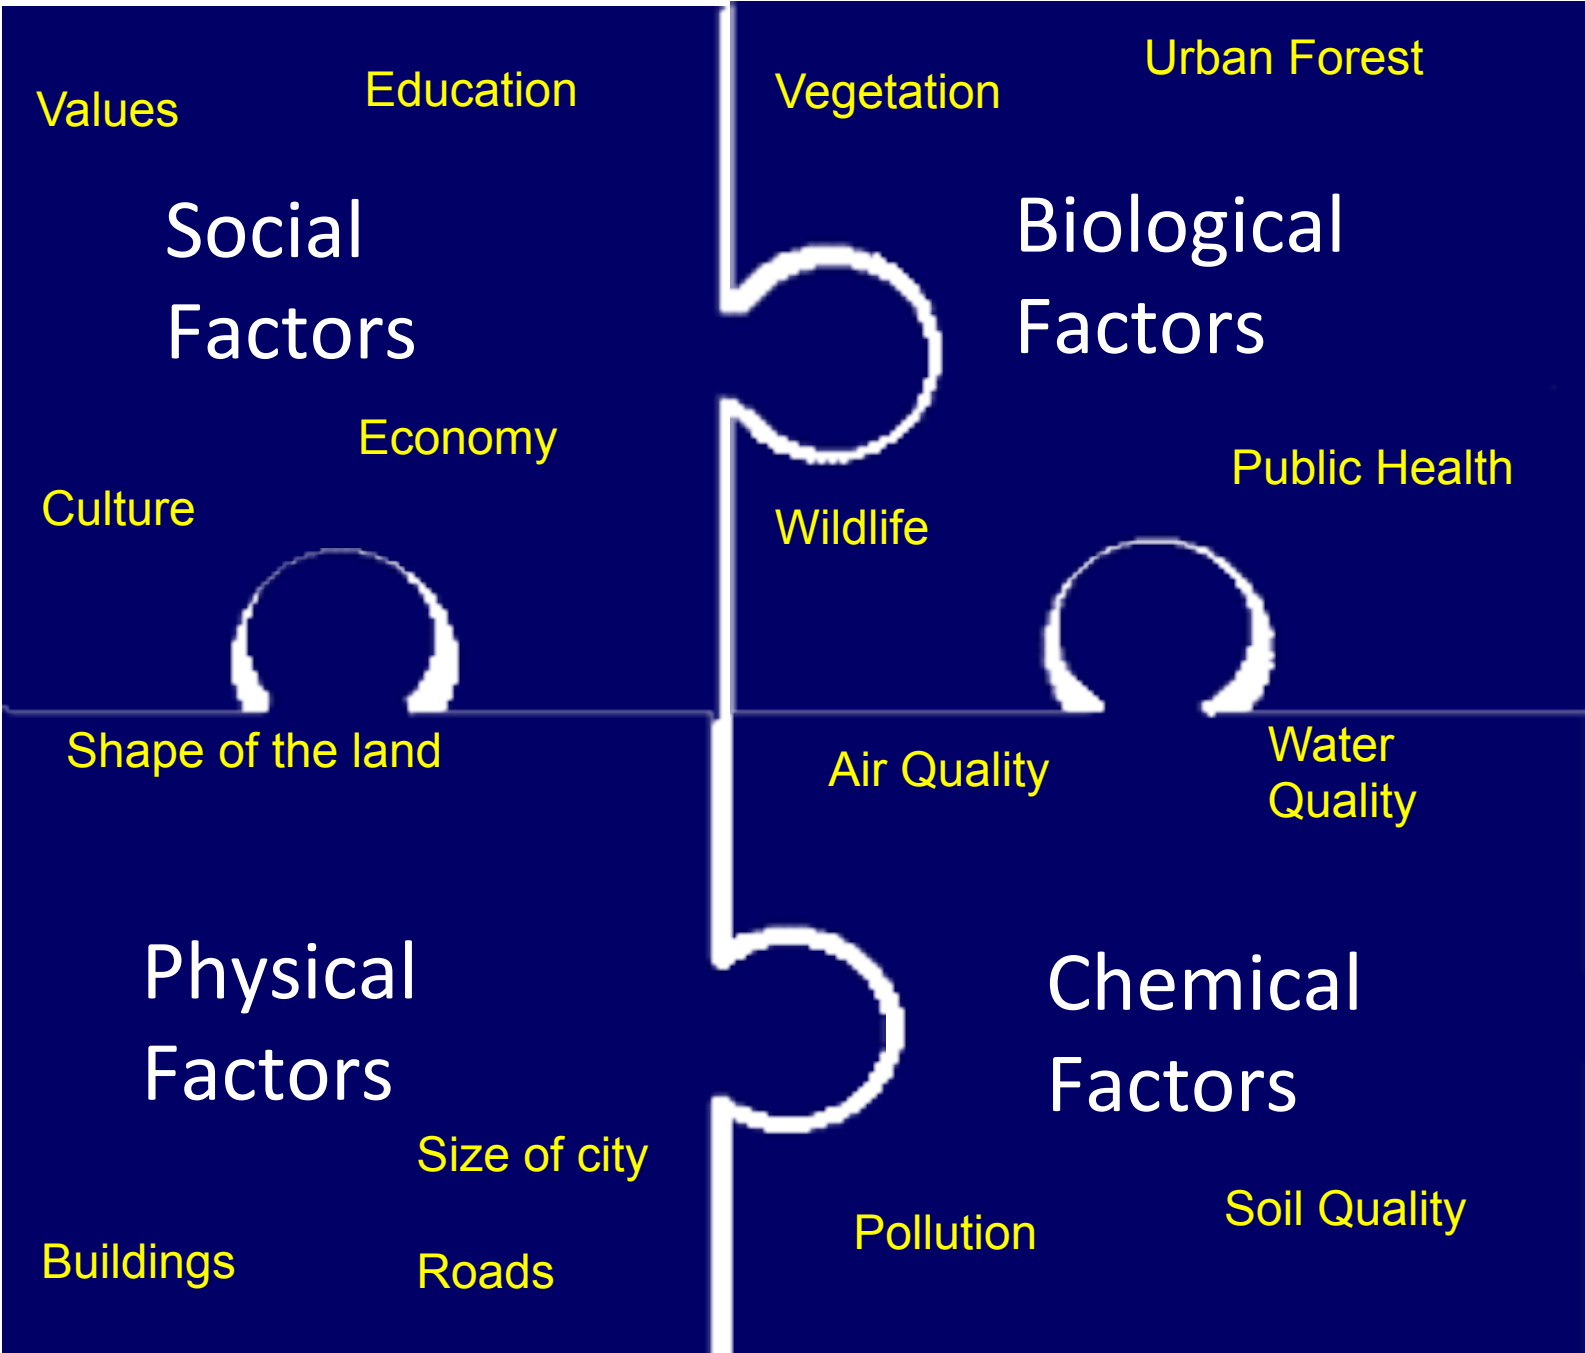

Urban Ecosystems are Complex Interconnected Systems

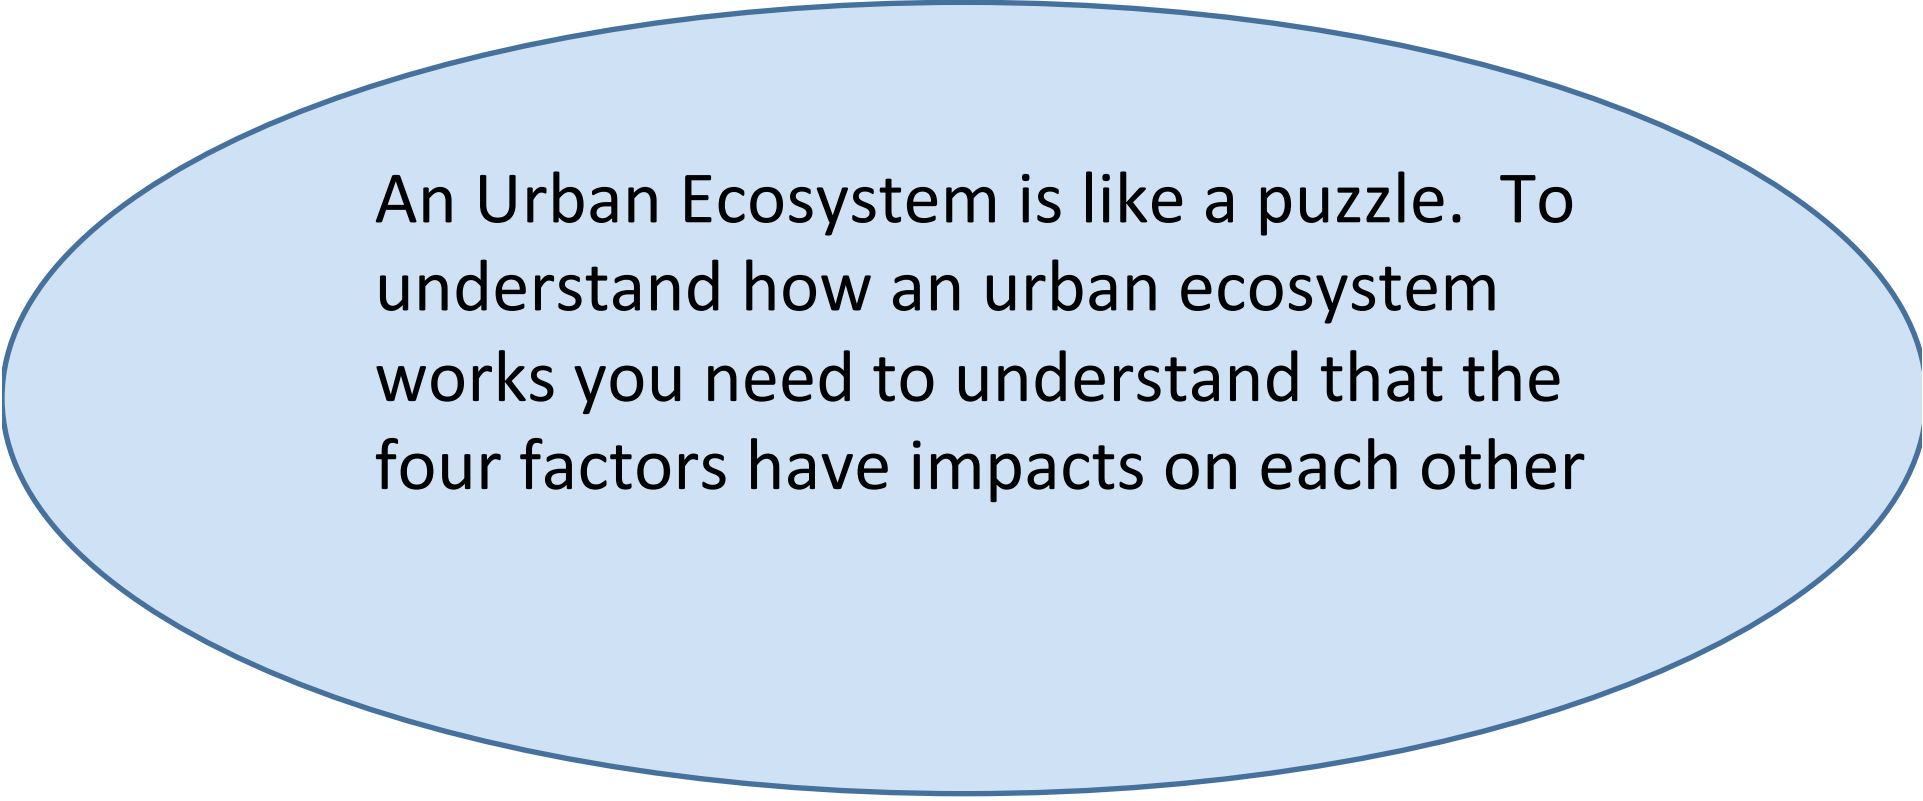

- In urban ecosystems, humans influence ecological factors (plants, air, soil, animals

AND

- Human decisions (where to build houses, parks, highways, schools) are influenced by ecological factors.

An Urban Ecosystem is like a puzzle. To understand how an urban ecosystem works you need to understand that the four factors have impacts on each other
